

HEALTHCARE

Project:

Central Texas Veterans Healthcare System

Location:

Temple, Texas

Products:

Wilsonart® RE-COVER™ in Hampton Walnut

RE-COVER™ is a safe and affordable surface that was a logical extension for CTVHCS's plan to improve the patient experience.

CTVCHS

"THE VALUE OF RE-COVER IS THAT YOU CAN REFINISH EXISTING CASEWORK WITHOUT HAVING TO REMOVE IT FROM THE ENVIRONMENT."

INDUSTRY MANAGER,
DR. MARK KREJCHI

PREVENTIVE CARE

The rise of hospital-acquired infections (HAIs) and antibiotic-resistant microbes means new infection control methods are greatly needed. Understanding the critical role that advanced surfaces play in preventing infections, the Central Texas Veterans Healthcare System (CTVHCS) in Temple, Texas introduced EOS^{cu} Preventive | Biocidal Surface™ to their patient rooms, nurse stations, and Emergency Department. EOS^{cu} (Cupron Enhanced EOS) is a hard, self-sanitizing surface that has the potential to save lives.

At the end of the day, they may not be adequate and that's where this project is really important in preventing these infections." Elaborating on the greatest reward that comes from installing EOS^{cu}, Dr. Jinadatha continues, "Veterans are special people. For us, even if we can save one life I think there is no value you can attach to our nation's heroes. Even one is way too many and of course, zero is the goal."
